July 26, 2006

The Honorable James R. Joseph  
Director  
Pennsylvania Emergency Management Agency  
2605 Interstate Drive,  
Harrisburg, Pennsylvania 17110-9364

Dear Director Joseph,

Nationwide water resource experts agree the most vulnerable aspect of our domestic water supply is in the distribution system. They further agree that fire hydrants are the most susceptible access in this delivery system, to acts of terrorism.

Davidson Fire Hydrant Technologies has developed the Davidson Anti-Terrorism Valve (ATV) to close this potential threat in our distribution system. I have enclosed the materials outlining the effectiveness of **the Davidson Anti-Terrorism Valve (ATV) from Windsor Technologies**. I have enclosed some information on the ATV including a DVD. This program currently is being implemented in the state of Georgia and Texas.

Recently, Michael Walden, CEO of Windsor Technologies who represents Davidson, has contacted my office. I would invite you to peruse the materials and DVD I have enclosed of the Davidson ATV. Their website is [www.watersecurity.us](http://www.watersecurity.us).

Mr. Michael Walden and Windsor Technologies have a proven track record. I recommend their firm without reservation. Thank you for your attention to this important matter. Please do not hesitate to contact me should you require further information.

Sincerely,

A handwritten signature in cursive script that reads "Catherine".

Catherine Baker Knoll  
Lieutenant Governor
